

Action Parameter Mapping

In Action Parameter Mapping you define the parameters needed for your selected action, e.g. if you need an Id for showing a concrete report, you define the Id as a Parameter Mapping for the Report Action element.

ATTRIBUTES

Name	Select the same name as the mapped parameter of the selected action has.
Field	Fill in the name of a field from the entity for which the action is created. The parameter will be the value of this field. If you want to use the whole record with all fields passed as an input, write only a dot "."
Type	Possible values are <code>Current</code> and <code>Original</code> .
