

Knowledge Requirements

Minimal Requirements

You can start developing with these minimal requirements, but since you will be developing full featured enterprise applications, be prepared to learn a lot.

- Basic database knowledge
- Basic programming (e.g. Excel formulas)
- XML

Basic Development

In order to create complete working applications, but without heavy business logic, you will need to have the following skills:

- Intermediate SQL
- Basic XSLT/XPath

Business Logic/API Development

In order to be able to deliver complex business logic, you will need to have additional knowledge.

- Advanced XSLT/XPath
- Advanced JSON/XML
- .NET / C# (in case of developing [custom service adapters](#))
